

# A Leper Healed

## You will need:

- 'Before' & 'After' pictures of leper printed onto white cardboard (or print on white paper and glue onto recycled cardboard from a cereal box)
- strips of material for bandages
- coloured pencils
- glue stick
- 2 pop-sticks

## What to Do:

- Colour in the pictures of the man with leprosy. Draw some sores on the skin of the 'Before' puppet.
- Glue a pop-stick on the back of each puppet.
- Wind some strips of material for bandages around the legs and arms of the 'Before' puppet. Glue in place if necessary.
- Leave the skin of the 'After' puppet clean.
- Wind some bandages round his arms & legs like the first one. You can unwind the bandages and show how his skin has been cured.
- *Alternatively*, glue the figures back to back on the same pop-stick.
