

Caring for the Earth

God was very pleased with the creation of the Earth.

People were given the responsibility to care for Creation.

There are lots of ways that we can look after and care for God's Creation.

One way we can do this is by planting a plant.

The roots of the plant hold the soil together. This stops soil going into rivers. When we have clean rivers we have healthy fish and other animals that live in the water.

Rivers flow into the sea. If rivers are clean that helps the ocean to be clean. That means animals that live in the sea and coral reefs are healthy too.

You might like to sow a seed that will become a plant that you can grow in some soil and so help to keep Creation healthy.

There are some other ideas for family projects that show ways that you can enjoy and learn more about Creation on these sites.
